OPEX® CertainScan®

Intelligent Software for Intelligent Scanning

WHY CERTAINSCAN® 6.1?

Through collaboration with our customers and innovation teams, each new release of CertainScan® enhances productivity and efficiency. This process continuously drives new value into the core processes that underpin highly accurate intelligent solutions.

Discover how OPEX's CertainScan software can take your scanning operations to the next level. Since its inception, CertainScan has been the price value leader in intelligent versatile document capture solutions. With the ability to customize scanning workflows and automatically identify different page types, CertainScan streamlines work and saves valuable time. Say goodbye to the tedious manual steps needed in many document capture operations. In-line batch editing and validation, complex automated physical and virtual sorting that can eliminate manual pre-sorting, and enhanced security are only the beginning. Experience the power of CertainScan today and see how it can transform your document capture process.

FEATURES

GEMINI™ RIGHT-SPEED™ SCANNING

OPEX's One-Touch scanning, traditional prep and high-speed scanning, and Gemini's revolutionary Right-Speed Scanning in a single product provides unparalleled flexibility and optimum performance for all levels of document mix and job complexity.

LONG-FORM DOCUMENTS

Long-form capture scans EKGs, gas/oil drilling logs, finance agreements, and other long forms up to 100" directly on Gemini and Falcon+ scanners without having to rely on import from other capture devices.

AUTOMATIC PAGE COPY

Never make copies again! This new CertainScan Transform™ feature eliminates having to make photocopies of a page and inserting them into a batch when images of the page are required to be included in more than one place in a batch.

PROCESS THRESHOLDS/ALERTS

CertainScan Monitor™ shows performance across the entire CertainScan suite at a glance and includes a new "Snap-Shot" customizable summary view of critical capture-pipeline processes. Automated email alerts pushed to managers when processing falls below the thresholds that threaten SLAs.

ADVANTAGES

SIMPLICITY

Customizable run screens and user groups help managers direct and train operators quickly. Centralized job management allows for job set up and control and data path and index integrity across all scanners from a controlled network location.

INTELLIGENCE

Automatic process traceability and statistics log operator actions while features like batch prioritization help automate process queues. Batch validation can include tools like database look-ups and business rules to ensure exception-free batches are captured while data and images are still on the scanner.

INTEGRATION

CertainScan modules are Win10/11 compatible for consistency in security and management policies. CertainScan Transform provides for integration with any downstream system including SQL based systems.

PERFORMANCE

Multi-instance VRS, processing pipeline enhancements, and the latest PC technologies accelerate CertainScan throughput. Scalability and resource sharing ensure the highest-performance processes by maximizing efficency.

CERTAINSCAN

CERTAINSCAN EDIT™

CertainScan Edit™ is an integrated solution for live or suspended batch editing during scanning. It can also be used after batches are completed. Our intuitive interface makes it easy to ensure that pieces are properly tagged, classified, and ordered. Choose the level of editing, from recovering a batch and cleaning up rule errors to simply editing metadata, as well as, inserting, deleting, or moving images. CertainScan Edit provides seamless batch editing and quality control that keep capture workflows error-free and moving forward.

CERTAINSCAN TRANSFORM™

CertainScan Transform is the integration application that allows for a seamless connection to any production workflow, RPA, or ECM system. CertainScan Transform will convert TIFF or JPG images into multipage TIFF, PDF, PDF/A-1b and PDF/A-2b, JPEG2000, JBIG. It provides control over data renaming, validation, document splitting, and image order modifications to match downstream requirements.

CERTAINSCAN MONITOR™

CertainScan Monitor shows the performance of the entire scanning, editing, processing, and transforming workflow. This console application provides the status of each batch, allows priority processing, and delivers notifications batches containing errors. With process thresholds set, automated email alerts can be pushed to managers when resources are stalled, or processing times fall below threshold. CertainScan Monitor provides a holistic view that keeps processes in check.

CERTAINSCAN PROCESSLINK

CertainScan ProcessLink is an API that unlocks endless possibilities for batch processing. Plug-ins can be added that correct or expand metadata, reclassify pieces with advanced OCR technologies, perform hand-writing recognition, and deliver refined content to the OPEX capture platform. A new OPEX plug-in has been created for Gemini called Post-Scan CertainScan, which can provide complex data analysis and image processing offline so that Gemini operators can focus on continuous scanning.

SOFTWARE COMPATIBILITY

CERTAINSCAN VERSIONS BY SCANNER MODEL	4.0	5.0	5.5	6.1
AS7200	x			
DS2200	x			
Falcon®/FalconV®		x	x	x
Falcon+®/FalconV+®		x	x	x
Gemini™				x

CERTAINSCAN TRANSFORM COMPATIBILITY	4.0	5.0	5.5	6.1
CertainScan Transform 2.2	x			
CertainScan Transform 2.3	x			
CertainScan Transform 3.0		x	x	
CertainScan Transform 3.5		x	x	
CertainScan Transform 4.0				x
